Dear Patients and Friends:

RE: Pulsed Electromagnetic Field Therapy -- PEMFT

I am delighted to share with you a very exciting technology -- new to Western Medicine -- that I recently discovered and which has made a huge impact on many aspects of my own health and life.

As some of you know, I recently underwent surgery on my cervical spine for pinched nerves that were causing pins and needles in my left arm and hand. Although the surgery was successful in alleviating those symptoms, my recovery from surgery was very rough, as I had unbearable pain in the back of my left shoulder. I called an old friend in California who is a retired Professor of Neurology at UCLA and also has a PhD in Electrophysiology. He spent his long career treating chronic pain with various "alternative" modalities. As luck would have it, he had been using a new device for about a month and had treated 14 pain patients at a Free Clinic. He also had been treating his own osteoarthritic knee, a result of having run 200 marathons. He had found the new treatment to be highly successful and he thought it would help my shoulder pain.

I contacted the manufacturer by email and we conducted lengthy discussions on this remarkable technology. I also researched the World scientific literature which contains thousands of published studies from Eastern Europe spanning over 30 years. PEMF has been widely used successfully for Pain Relief, Arthritis, Sports Injuries, Osteoporosis, Backache, Carpal Tunnel Syndrome, Neuralgia, Epicondylitis (Tennis Elbow), Fibromyalgia, Fracture Healing, Pseudo arthrosis, Rheumatic pain, Tendinitis, Low back pain, Wound healing and many other medical conditions including resolution of hemorrhoids and erectile dysfunction. It is even being used to help \$1.2 million race horses with osteoarthritis of their spines get back to running and jumping!

The developer/manufacturer of this amazing device has a PhD in Biomedical Engineering and was prominent in his field for many years in Europe, where he developed the first Electro-Acupuncture devices as well as the first Neon laser for medical use. He also produces another impressive device for home rehabilitation of stroke patients. It is highly successful in getting stroke victims to move formerly weak or paralyzed muscles. Recently, I had the pleasure of having him and his lovely wife visit my office where we had several hours of additional discussions, during which I was able to obtain even more valuable knowledge of this device. There is nothing else on the market with this degree of magnetic energy that can completely penetrate all the way through the body. The technology is so advanced and complex that the

manufacturer had no fear of competitors reverse engineering the device. It would be far too costly and time consuming to make it worth their while.

After doing my due diligence and being convinced of the validity of the technology, I ordered a unit and started using it twice a day. Using it means simply lying on a treatment pad twice a day for 30 minutes and letting the powerful electromagnetic energy penetrate your body completely, altering the cellular membranes to improve blood flow and oxygenation of all cells. Remember, the entire body is controlled by electrical activity at the cellular level. When using this device, there is no sound, no vibration and virtually no sense of anything happening, other than a slight warmth and a sense of well being and relaxation. In fact, it is nearly impossible to stay awake during treatment. I always fall asleep flat on my back, which I have never been able to do before. So how does one know if the device is doing anything at all? Good question! Other than the lighted digital display and countdown timer, there is a simple and VERY clear way to know that the powerful electromagnetic energy is pulsing all the way through your body. If you take a magnet in your hand and hold it above your body, you will feel the magnet vibrate from the energy that has passed completely through your body! If you hold the magnet near your ear, you will HEAR the magnet vibrate with sounds very similar to an MRI machine!

Well, what good is all this pulsing magnetic energy doing while permeating your body? Let me tell you my personal experience:

- I immediately had decreased pain in my shoulder.
- The scar on the back of my neck from the recent surgery was very lumpy due to the sutures under the skin, and the scar itself was wide and unsightly. Within one week, all the lumps were nearly gone and the scar looked much better.
- I now fall asleep quickly and sleep much better without the use of any sleeping pills.
- After two months, pain and stiffness in my upper and lower back are MARKEDLY improved and I feel comfortable even after performing strenuous surgery lasting many hours. If I miss a treatment, I can feel a tremendous difference and I again have discomfort.
- Perhaps most remarkably, my chronic lung disease has improved dramatically. I am no longer short of breath and the measured oxygen in my blood has increased! My pulmonary specialist is very impressed, as this type of lung problem NEVER improves -- it only gets worse.
- A large lipoma (fatty tumor) on my back has nearly disappeared
- And did I mention libido? Trust me, it is great!

Can you tell yet how excited I am about this New/Old technology that is just being introduced to the West?! I am very anxious to have as many of you as possible try this at home. I am hopeful that others will also experience improved hair growth and that Liposculpture patients will have reduced swelling and faster recovery. In addition, I know you will find it very beneficial in improving all the conditions mentioned earlier. Osteoporosis can be reversed faster than with prescription medication! And I forget to mention that there have NEVER been ANY reported side effects!

Rather than offer treatments in my office, which would severely limit the number of treatments you could receive in a week, you would be much better off to have the device at home where you and your family can use it twice a day, every day. And there would be no need to travel anywhere to get treatments, so it would be ultra-convenient. What I do is set my alarm to go off a half hour early in the morning, start the timer and promptly fall back asleep until my normal time to arise. At night, I simply use it at bedtime. I fall asleep quickly and the timer shuts the device off when the cycle has completed. I then sleep right through the night.

If you would be interested in trying one of these impressive units yourself, I would be happy to get you one. Or if you have any questions, please let me know. I really want to share this fantastic device with as many people as possible. You are welcome to come to my office where I will personally give you a demonstration.

Sincerely,

Barry Miller

Barry David Miller, M.D.
